

Homework 16

JavaBat: Working with Strings

Head over to <http://www.javabat.com> and click the create account link as shown here:

The screenshot shows the JavaBat website in a Mozilla Firefox browser window. The address bar displays <http://www.javabat.com/>. The page title is "JavaBat - Mozilla Firefox". The website content includes a navigation bar with links: [about](#), [help](#), [done](#), [prefs](#), and [create account](#). A red circle with the number "1" is drawn around the "create account" link, with a red arrow pointing to it. Below the navigation bar, there is a section titled "Warmup" with a star rating and a list of problems: [sleepIn H](#), [monkeyTrouble H](#), and [sumDouble H](#). To the right of the navigation bar, there is a login form with fields for "id/email" and "password", a "log in" button, and a [forgot password](#) link. Below the "Warmup" section, there is a "Create Account" form. The form has fields for "Email (used as account id)", "Password", "Confirm password", and "Name (last, first) e.g. Smith, Alice". The "Email" field contains "sdgilbrt@pacbell.net", the "Password" and "Confirm password" fields contain "*****", and the "Name" field contains "Gilbert,Stephen". There is a "Create Account" button. Below the form, there is a "privacy statement" link. To the right of the "Create Account" form, there is a "Teacher Share" section. It has a text input field for "Share To" containing "sgilbert@occ.cccd.edu" and a "Share" button. Below the "Share" button, there is a "privacy statement" link.

You can use your OCC email address (which will probably make it easier to remember for this class), but that's not important. It is important that you use your last and first name as it appears on my class roster (or as you may have changed it for grading). It has to be the same last and first name you use for the in-class exercise file names.

Once you have created your account, click the [prefs](#) link on the JavaBat home page and fill in the **Teacher Share** option with my email address: **sgilbert@occ.cccd.edu**. This is the only way I'll be able to see that you've completed your assignments.

Complete the following exercises in the **String1** section. For these exercises (which don't involve loops or **if** statements), you'll use **String** concatenation, and **String** functions such as **substring()** and **length()**. Complete the problems: **makeTags**, **extraEnd**, **firstHalf**, **nonStart**, and **middleTwo**.
