

Homework 11

JavaBat: Configuring your account

Head over to <http://www.javabat.com> and click the create account link as shown here:

The screenshot shows the JavaBat website in a Mozilla Firefox browser window. The address bar displays <http://www.javabat.com/>. The website header includes navigation links: [about](#), [help](#), [done](#), [prefs](#), and [create account](#). A red circle with the number '1' and an arrow points to the 'create account' link. Below the header, there is a 'Warmup' section with a star rating and a list of problems: [sleepIn](#), [monkeyTrouble](#), and [sumDouble](#). A 'Create Account' form is overlaid on the right side of the page. The form contains the following fields: 'Email (used as account id)' with the value 'sdgilbrt@pacbell.net', 'Password' (masked with asterisks), 'Confirm password' (masked with asterisks), and 'Name (last, first) e.g. Smith, Alice' with the value 'Gilbert,Stephen'. A 'Create Account' button is at the bottom of the form. Below the form, there is a 'Teacher Share' section with a 'Share To' field containing 'sgilbert@occ.cccd.edu' and a 'Share' button. A 'privacy statement' link is visible below both the 'Create Account' and 'Teacher Share' sections.

You can use your OCC email address (which will probably make it easier to remember for this class), but that's not important. **It is important that you use your last and first name as it appears on my class roster (or as you may have changed it for grading).** It has to be the same last and first name you use for the in-class exercise file names.

Once you have created your account, click the [prefs](#) link on the JavaBat home page and fill in the **Teacher Share** option with my email address: **sgilbert@occ.cccd.edu**. This is the only way I'll be able to see that you've completed your assignments.
