

Assignment 03

Formatting and Comments

Due before class on June 9 (Monday)

Download the starter project **hw03-Starter.zip** from the class Links page and import it in to BlueJ. The project contains a program named **SayWhat** that is completely legal under Java's syntax rules. Compile it and run the program to prove to yourself that it contains no errors.

Now, open up the source code in the BlueJ editor. SayWhat is right, huh? It's a pretty unreadable program, and it doesn't come close to following the style guidelines for writing well-formatted code. Reformat the code using the rules we discussed in class and those found in the CS 170 Styleguide (which you can download from the class Links page as well). Make sure you add a JavaDoc comment to the top of the file including the **@author** and **@version** tags as discussed in lecture as well as a JavaDoc comment for the **main()** method. You can find the format in the Styleguide.

Use the CheckStyle plugin to double-check your work, and then submit it to Web-Cat before the deadline. You can use the BlueJ Submitter plugin, (like we did in class), or you can just upload the file through the Web interface.

This program will be graded **entirely** on style and formatting. You can submit the program three times. If you don't get full credit, be sure that you click on the hyperlink (shown below) to see more on each of the style faux-pas caught by Web-Cat.

Assignment	CS 170(Java Summer Session): HW03 try #3		
Name	Stephen Gilbert (sgilbert)		
Submitted	05/30/08 12:41PM, 16 days, 8 hrs, 13 mins early		
Total Score	0.0/5.0		

File	AutoGrade Cmts	AutoGrade Pts	
README.TXT	0	0.0	
SayWhat.java	25	-5.0	0.0%
